## Section 1: Demographic Trends

### 1.1 Population Size and Structure:

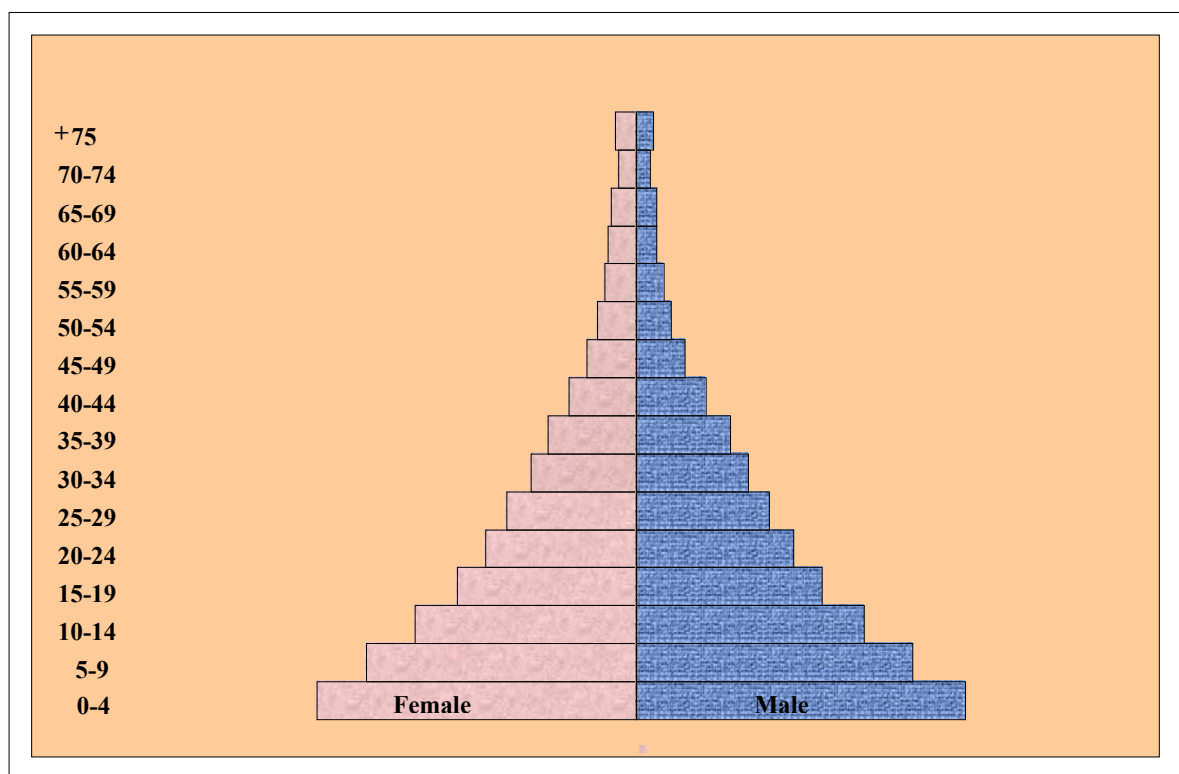

The total number of Palestinian people according to the estimation 2011 was (4,168,858) of which (50.8%) are males and (49.2%) are females.

#### 1.1.1 Age and Sex Distribution:

Age distribution of the population has important implications for the health status of the population, due to the different health needs, the differential patterns of health care utilization and the different health status among the various age groups.

The below population pyramid shows age and sex distribution of population (40.8 %) is under 15 years old. The age group (0-4) years is (14.7%), while for the ages over 65 years constitutes only (2.9 %.)

**Figure (1) Population by Age Group and Sex, Palestine, 2011**

#### 1.1.2 Dependency:

Dependency ratio is calculated as the number of persons below fifteen and above sixty-five per 100 person's aged 15-64 years. For 2011 the dependency ratio for Palestine is (75), (73) in the West Bank, and (87) in the Gaza Strip. This does not reflect the actual economic dependency because not everybody enrolled in the workforce (15-64 years) is actually earning (students, housewives and unemployed).

### **1.1.3 Population Growth:**

According to the PCBS figures in 2011, the natural increase of population in Palestine was (2.9%), (2.6 %) in the West Bank and (3.3 %) in the Gaza Strip.

## **1.2 Births:**

### **1.2.1 Reported Live Births:**

The total number of reported live births in Palestine was (121,493); (64,614) (53.2%) in west Bank and (56,879) (47.8%) in Gaza Strip.

### **1.2.2 Reported Crude Birth Rate:**

Despite progressive decline over the years, the number of live births per 1,000 of population per year is still high compared with other countries. The Crude birth rat (CBR) in 2011 was (29.1 \ 1,000) of population in 2011, in West Bank (25\ 1,000) and (35.8 \ 1,000) in Gaza Strip.

### **1.2.3 Fertility:**

Fertility data are based on a family survey that PCBS conducted the total fertility rate in Palestine was (4.3); (4.2) in West Bank and (4.5) in the Gaza Strip.

## **Section 2: Trends in Health Status**

### **2.1 Reported Morbidity:**

#### **2.1.1 Communicable Diseases:**

The control of communicable diseases plays a vital role in the achievement of “health for all”, a core principle of WHO policy. The tools needed for this task are available and well known. The great challenge facing the Mediterranean region today is to determine how best to use these tools and how to mobilize the resources needed to achieve this goal. Palestine succeeded in prevention of many fatal and disfiguring diseases as schistosomiasis, leprosy, diphtheria, plague, poliomyelitis, rabies, but is still working toward control of other infectious diseases, such as Meningococcal Meningitis, Brucellosis, HIV/AIDS, Hepatitis, Tuberculosis, Diarrhea, and Pneumonia. In spite of the successful control of many diseases through health education and vaccination, new diseases have emerged worldwide which have a negative impact on health status.

#### **2.1.2 Vaccine Preventable Diseases:**

Globally, at least 2 million people in all age groups die every year from diseases preventable by vaccines recommended by the WHO. Coverage levels of vaccines are considered one of the best indicators of health system performance and progress towards Millennium Development Goals. The target for the Palestinian health care system is that every child will receive a safe vaccine for each childhood vaccine-preventable disease. In Palestine, immunization coverage remains high. Based on the reports received from our preventive medicine department in PHC, the average coverage rates were more than (99%) for all vaccines, which directly impacts on the reduction in the incidence of vaccine preventable diseases.

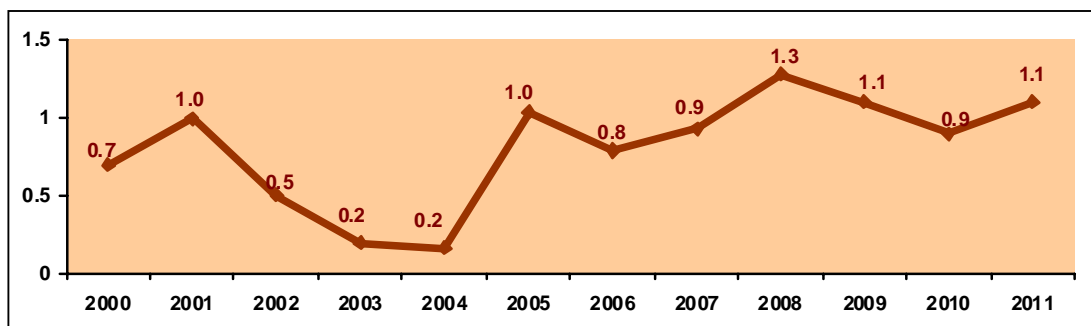

##### **2.1.2.1 Poliomyelitis and Acute Flaccid Paralysis (AFP):**

The Regional office for the Eastern Mediterranean Region (EMRO) of the World Health Organization (WHO) adopted a resolution to eliminate poliomyelitis from the region by 2000.

In Palestine this target had been achieved earlier, where the last reported case of polio among Palestinian children was in 1984.

Regarding to AFP, (17) cases were reported in Palestine in 2011 with an incidence rate of (1.1) per 100,000 children  $\leq 15$  years. Regional distribution showed that (6) cases were reported in Gaza Strip, and (11) cases reported in West Bank. All cases of AFP were free of Poliomyelitis.

**Figure (2) Annual Reported Incidence Rate of Acute Flaccid Paralysis (per 100,000 Children  $\leq 15$  year), Palestine, 2000 – 2011**

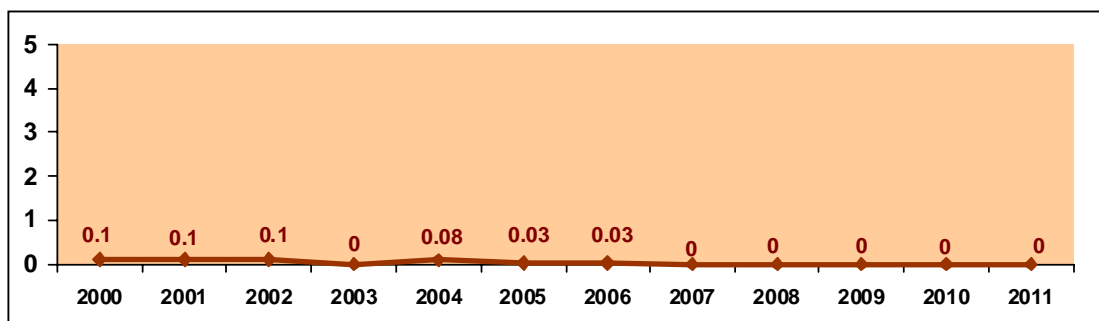

#### **2.1.2.2 Measles:**

Palestine considered one of the countries is about to achieve this goal of elimination of measles. The Incidence of measles still under control, approximately one to three cases reported yearly in the last several years.

In the year 2006, only one case was reported. While no reported cases in 2008, where one case was reported in Ramallah Governorate during 2009, and one cases reported in Jerusalem during 2010, where no cases was reported during 2011.

World Health Organization criteria for elimination of measles have been implemented in Palestine.

**Figure (3) Annual Reported Incidence Rate (per 100,000) of Measles, Palestine, 2000 -2011**

#### **2.1.2.3 Tuberculosis:**

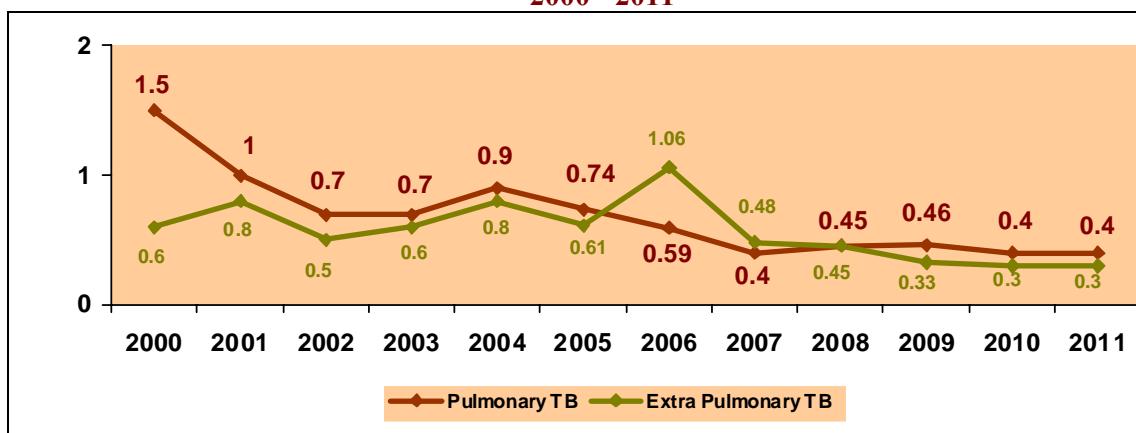

In 2011 in Palestine, (18) cases of pulmonary tuberculosis were reported (12 cases in Gaza Strip and 6 cases in West Bank) with an incidence rate of (0.4) per 100,000.

Plus (14) cases of extra pulmonary tuberculosis were reported in Palestine in 2011 (11 cases in Gaza Strip and 3 cases in West Bank) with an incidence rate of (0.3) per 100,000. Vaccination coverage of BCG is very high in Palestine (about 100%).

In 2010 no reported deaths due to tuberculosis in Palestine.

Since 1996 the Palestinian MOH using DOTS approach in tuberculosis treatment.

**Figure (4) Annual Reported Incidence Rate (per 100,000) of Tuberculosis, Palestine, 2000 - 2011**

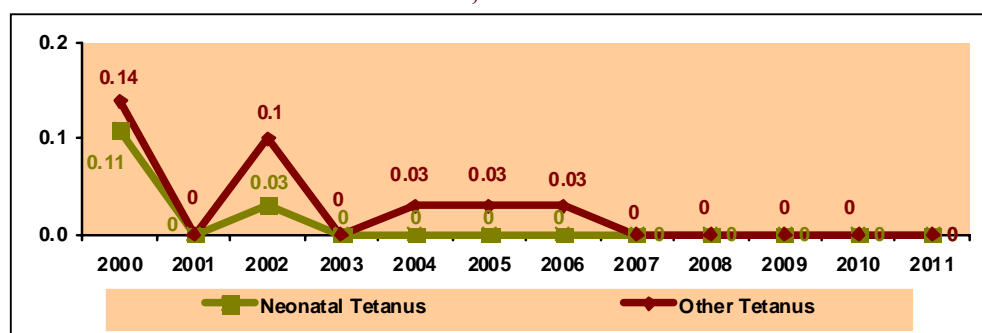

#### 2.1.2.4 Tetanus:

Tetanus, particularly the neonatal form, remains a significant public health problem worldwide particularly in densely populated regions.

In spite of that, there are no reported cases of neonatal tetanus in Palestine in the last eight years, which reflect the success of Ministry of Health (MOH) in the control and elimination of neonatal tetanus. In addition, MOH ensures high vaccination coverage among pregnant women.

2 cases of tetanus was reported year 2011 one of them was Neonate.

**Figure (5) Annual Reported Incidence Rate of Tetanus (per 100,000), Palestine, 2000 - 2011**

#### 2.1.2.5 Mumps:

Since December 2003, there was a large outbreak of mumps in the Nablus Governorate that affected children, mainly below 15 years of age, of whom (72.9%) were previously immunized. In total, more than (4,000) children, both refugees and non-refugees, were affected. The outbreak reached its peak during April and May 2004, subsided thereafter, but spread out to other districts in the West Bank. The mumps outbreak was attributed to possible breakdowns in the public sector cold chain system due to frequent power cuts. In the year 2006, there was a notable decrease in reported cases of mumps in the West Bank, wherein (260) cases were reported with an incidence rate of (7.8 per 100,000) compared with (192.8 per 100,000) in the year 2005.

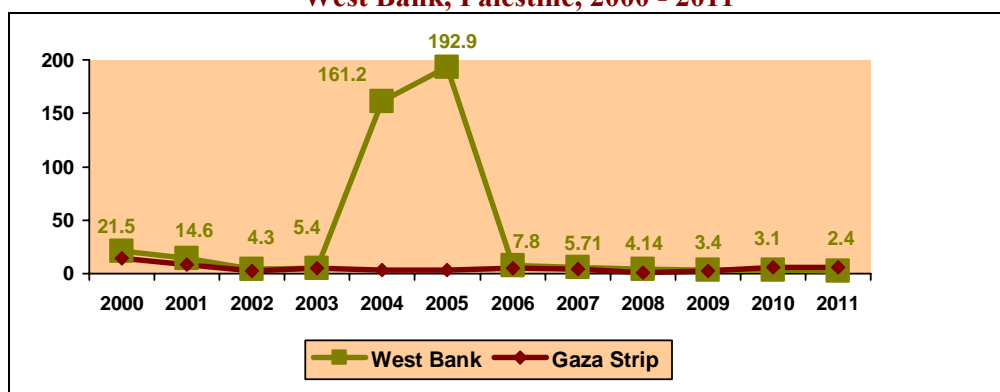

However, there was an increase of reported cases in the Gaza Strip reaching (69) cases with an incidence rate of (4.7 per 100,000) compared with (3 per 100,000) in the year 2005. In 2007, (190) cases were reported with an incidence rate of (5.05 per 100,000) of populations (134 cases in West Bank, 56 in Gaza Strip).

While in 2008, (105) cases were reported (97 cases of them in WB, 8 cases in GS). The incidence rate was (2.79 per 100,000) of population. In 2009, (118) cases were reported (84 of them in WB and 34 in GS) with an incidence rate (3 per 100,000) of population; (3.4) in WB and (2.3) in GS.

in 2010 (159) cases were reported in Palestine with incidence rate (4.2) per 100,000 of population, (70) cases in West Bank with an incidence rate (3.1) and (89) cases in Gaza Strip with an incidence rate (5.8) per 100,000 of population.

in 2011 (153) cases were reported in Palestine with incidence rate (3.7) per 100,000 of population, (62) cases in West Bank with an incidence rate (2.4) and (91) cases in Gaza Strip with an incidence rate (5.7) per 100,000 of population

**Figure (6) Annual Reported Incidence Rate of Mumps (per 100,000), West Bank, Palestine, 2000 - 2011**

#### 2.1.2.6 Meningitis:

Meningitis can be caused by various sorts of viruses, bacteria, and even by fungi.

##### 2.1.2.6.1 Viral (Aseptic) Meningitis:

Viral meningitis is rarely serious but requires supportive care. Viral meningitis is considered one of the endemic diseases in Palestine with some seasonal variation. The majorities of viral meningitis cases (more than 72%) are reported in spring and summer seasons.

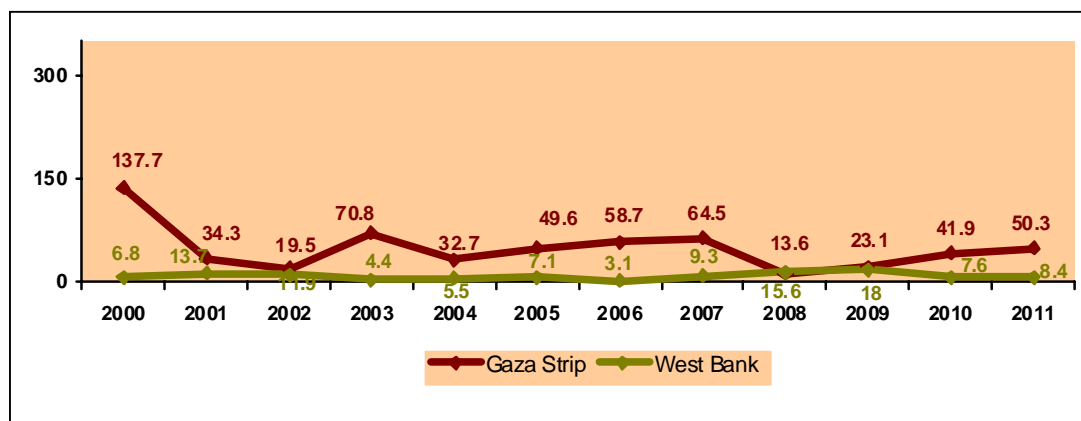

In the year 2009 (783) cases were reported with an incidence rate of 19.9 per 100,000 of populations. (440) cases were reported in West Bank with an incidence rate (18) per 100,000 of population and (343) cases in Gaza Strip, with an incidence rate (23.1) per 100,000 of populations.

In 2010 (816) cases were reported in Palestine with an incidence rate (21.4) per 100,000 of population (173) Cases in the West Bank with an incidence rate (7.6) per 100,000 of population, and (643) case in Gaza Strip, with an incidence rate (41.9) Per 100,000 of population

In 2011 (1,015) cases were reported in Palestine with an incidence rate (24.3) per 100,000 of population (216) Cases in the West Bank with an incidence rate (8.4) per 100,000 of

population, and (799) case in Gaza Strip, with an incidence rate (50.3) Per 100,000 of population

**Figure (7) Reported Incidence Rate of Viral (Aseptic) Meningitis by Region, Palestine 2000 - 2011**

#### **2.1.2.6.2 Bacterial Meningitis:**

Bacterial meningitis is an important serious illness worldwide; it can be caused by a range of different bacteria: Haemophilus influenza type b, Neisseria meningitides, Streptococcus pneumoniae and other bacteria.

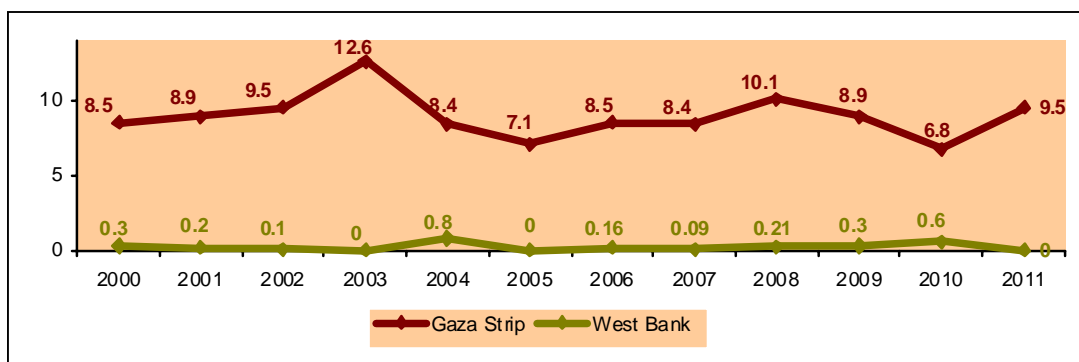

##### **2.1.2.6.2.1 Meningococcal Disease:**

Meningococcal disease remained a priority concern type of meningitis, because it is potentially fatal and should always be viewed as a medical emergency, which is caused by Neisseria meningitides.

Meningococcal meningitis is an endemic disease in Gaza Strip and sporadically reported in West Bank.

In the year 2009, (140) cases were reported with an incidence rate (3.6) per 100,000 of population, (8) cases were reported on the West Bank with an incidence rate (0.3) per 100,000 population and (132) cases reported in Gaza Strip with an incidence rate (8.9) per 100,000 of population. In the year 2010 (118) case were reported with an incidence rate (3.1) per 100,000 population, (14) cases in West Bank with an incidence rate (0.6) per 100,000 population and (104) cases in Gaza Strip with an incidence rate (6.8 per 100,000) population. In the year 2011 (152) case were reported with an incidence rate (3.6) per 100,000 population, one case in West Bank and (151) cases in Gaza Strip with an incidence rate (9.5 per 100,000) population.

**Figure (8) Annual Reported Incidence Rate of Meningococcal Disease (per 100,000), Gaza Strip and West Bank, Palestine, 2000 - 2011**

#### **2.1.2.6.2.2 Haemophilus Influenza Meningitis:**

Infections caused by Haemophilus influenza type b (Hib), as meningitis are responsible for high morbidity and mortality among children worldwide.

In Palestine, during the past years, the incidence rate of Haemophilus influenza meningitis was constant and kept at the same average, one case was reported 2008 with an incidence rate of (0.03) per 100,000 of populations, were no cases reported in 2009.

No any reported cases in 2010 in Gaza Strip and (2) reported cases in West Bank (one in Jerusalem Governorate and the second in Ramallah Governorate) with an incidence rate (0.0). Where one case was reported in Gaza Strip with incidence rate (0.1) per 100,000 of population, No cases reported in West Bank.

#### **2.1.2.6.2.3 Other Bacterial Meningitis:**

Other bacterial meningitis is caused by variety of bacterial infection; mainly Streptococcus pneumoniae.

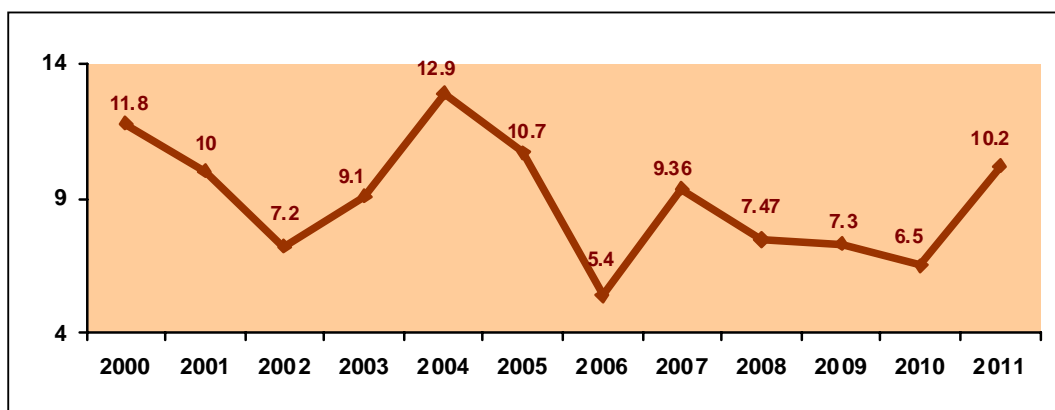

In Palestine, the incidence rate in 2009 was (7.3) per 100,000 of population (289) cases was reported, (153) in West Bank, with an incidence rate of (6.2) per of 100,000 and (136) cases in Gaza Strip with an incidence rate of (9.1) per 100,000.

While (246) cases were reported in 2010 with an incidence rate (6.5) per 100,000 of population, (77) cases in West Bank, with an incidence rate of (3.4) per 100,000 and (169) reported cases in Gaza Strip with an incidence rate of (11.0) per 100,000 of population.

In 2011, (424) cases was reported with an incidence rate (10.2) per 100,000 of population, (81) cases in West Bank, with an incidence rate of (3.1) per 100,000 and (343) reported cases in Gaza Strip with an incidence rate of (21.6) per 100,000 of population.

### **2.1.2.7 Viral Hepatitis:**

Viral hepatitis is one of the most serious health problems worldwide, with some variation from one type to another and from country to another. In Palestine, there are three types of diagnosed hepatitis: A, B, and C.

#### **2.1.2.7.1 Hepatitis A Virus (HAV)**

Hepatitis A is considered one of the most common diseases and the leading cause of acute viral hepatitis world wide.

Palestine as one of developing countries is still endemic for hepatitis A. A notable decrease in number of cases were reported in the year 2006 (2,044) cases with an incidence rate of (52) per 100,000 of population, compared with (3,199) cases with an incidence rate of (85) per 100,000 in 2005. The number of reported cases decreased to (1,893) cases in 2008 with an incidence rate of (50.32) per 100,000. (1,046) cases were reported in West Bank with an incidence rate of (44.6) per 100,000, and (847) cases were in the Gaza Strip with an incidence rate of (59.79) per 100,000 of populations.

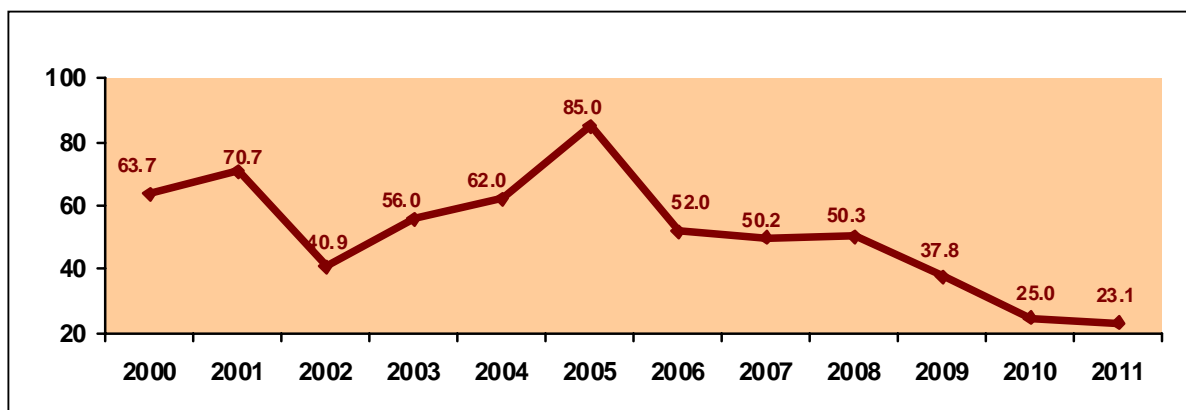

In 2009 the total numbers of cases continue to decline up to (1,488) cases with an incidence rate of (37.8) per 100,000 of populations; (33.1) in West Bank and (45.6) in Gaza Strip.

In 2010 (952) cases was reported with an incidence rate of (25) per 100,000 of population; (633) cases in West Bank with an incidence rate of (27.8) and (319) reported cases in Gaza Strip with an incidence rate of (20.8).

In 2011 (965) cases was reported with an incidence rate of (23.1) per 100,000 of population; (542) cases in West Bank with an incidence rate of (21) and (423) reported cases in Gaza Strip with an incidence rate of (26.6).

Good personal hygiene and proper sanitation can help in prevention of hepatitis A. The majority of HAV infection still takes place in early childhood, where it is asymptomatic and of little clinical significance.

**Figure (10) Annual Reported Incidence Rate of Hepatitis A Disease (per 100,000), Palestine, 2000 – 2011**

#### **2.1.2.7.2 Hepatitis B Virus (HBV):**

The Hepatitis B virus (HBV) infection is a major public health problem in the Middle East. The majority of the countries in the region have an intermediate or high endemic of HBV infection. Palestine is considered an intermediate endemic area of hepatitis B.

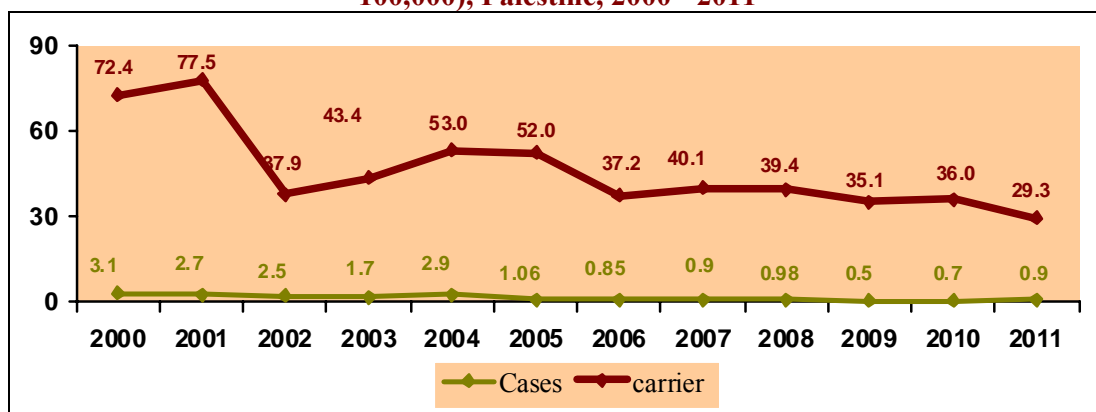

In the year 2008, there were (37) cases of hepatitis B reported with an incidence rate of (0.98) per 100,000 of populations, (31) cases out of them were reported in West Bank with an incidence rate of (1.32) per 100,000.

In 2009, 21 cases are reported in West Bank with incidence rate of (0.5) per 100,000 of populations, where no cases reported in Gaza Strip. In regards to hepatitis B carriers, (1,382) carriers were reported with an incidence rate of (35.1) per 100,000 of population, (41.9) per 100,000 in West Bank and (24) per 100,000 in Gaza Strip.

In 2010, only (27) cases were reported in West Bank with an Incidence rate of (1.2) per 100,000 of population and no reported cases in Gaza Strip. (1,373) carriers were reported in Palestine with an incidence rate of (36) per 100,000 of population, (966) out of them in West Bank with an incidence rate of (42.4) and (407) carriers in Gaza Strip with an incidence rate of (26.5).

In 2011, only (23) cases were reported in West Bank with an Incidence rate of (0.9) per 100,000 of population and no reported cases in Gaza Strip. (1,222) carriers were reported in Palestine with an incidence rate of (29.3) per 100,000 of population, (847) out of them in West Bank with an incidence rate of (32.8) and (375) carriers in Gaza Strip with an incidence rate of (23.6).

**Figure (11) Annual Reported Incidence Rate of Hepatitis B Cases and Carrier, (per 100,000), Palestine, 2000 - 2011**

#### **2.1.2.7.3 Hepatitis C Virus (HCV):**

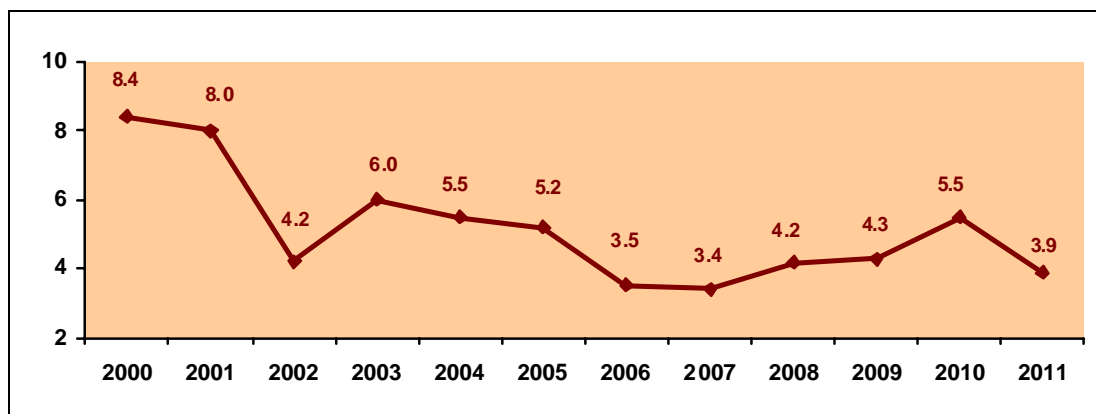

Surveillance of hepatitis C in Palestine started in 1994, but it needs more national attention.

Palestine still enjoys a low prevalence rate of HCV infection. In the year 2009 (2) cases of hepatitis C were reported in West bank with an incidence rate (0.1) per 100,000 of population, where no cases was reported in Gaza Strip and (166) hepatitis C carriers were reported with an incidence rate of (4.2) per 100,000, (122) carriers in West Bank with an incidence rate (5) and (44) carriers in GS with Bank with an incidence rate (3).

In 2010 (2) cases was reported in West Bank with an incidence rate (0.1) per 100,000 of population, no cases were reported in Gaza Strip, where (207) carriers were reported with an incidence rate (5.4) per 100,000 of population, (143) in West Bank with an incidence rate (6.3) and (64) in Gaza Strip with an incidence rate (4.2).

In 2011 (5) cases was reported in West Bank with an incidence rate (0.1) per 100,000 of population, no cases were reported in Gaza Strip, where (157) carriers were reported with an incidence rate (3.8) per 100,000 of population, (86) in West Bank with an incidence rate (3.3) and (71) in Gaza Strip with an incidence rate (4.5) per 100,000 of population.

### 2.1.2.8 Human Brucellosis:

Brucellosis has been reported annually in Palestine since 1987, with a peak in 1990. Which was considered one of the highest incidence rate in Mediterranean countries until a brucellosis control program was implemented having a clear impact on the incidence rate of brucellosis and reducing its annual incidence rate to (2.6) per 100,000 of population in 2006 compared with (3.3) per 100,000 in 2005. Where in 2008, 215 reported cases with an incidence rate (5.72) per 100,000, (207) cases were in West Bank. In 2009, the total number of reported cases was declined up to (196) cases with an incidence rate (5) per 100,000 of populations, (194) cases were in West Bank with an incidence rate (7.9) and (2) cases in Gaza Strip with an incidence rate (0.1).

In 2010 the reported cases increases up to (205) cases with an incidence rate of (5.4) per 100,000 of population, (197) cases in West Bank with an incidence rate of (8.7) and (8) cases in Gaza Strip with an incidence rate of (0.5).

In 2011 the reported cases decreased from (205) cases in 2010 up to (179) in 2011 with an incidence rate of (4.3) per 100,000 of population, (172) cases in West Bank with an incidence rate of (6.7) and (7) cases in Gaza Strip with an incidence rate of (0.4).

### 2.1.2.9 Acquired Immunodeficiency Syndrome (HIV/ AIDS):

The Mediterranean Region is no longer free from this global epidemic. Although the epidemic is still in its early stage in general, there are alarming signs of expansion in Palestine.

The cumulative reported cases from 1988 total (72) cases, out of which there were (60) AIDS cases and (12) HIV carriers.

### 2.1.3 Non Communicable Diseases

#### 2.1.3.1 Cancer:

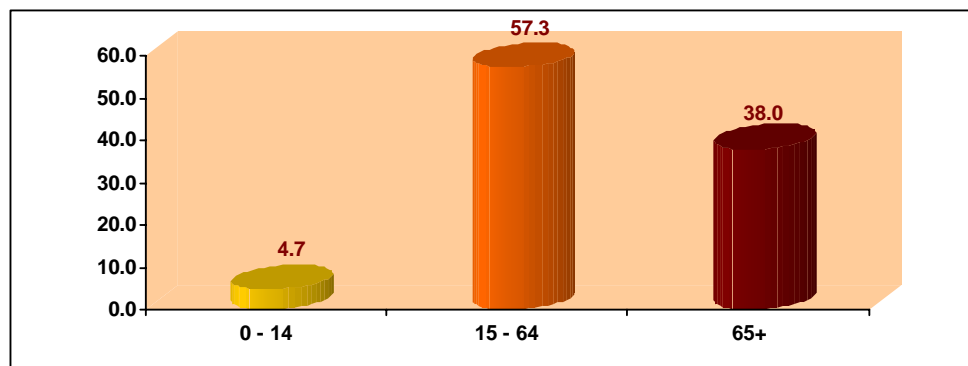

In 2011 (1,498) new cancer cases were reported in West Bank, (813) cases were females (54.3%) and (685) were males (45.7%).

In 2011 the cancer incidence rate was (64.2) per 100,000 of population.

**Figure (14) Distribution of Reported Cancer Cases by Sex, West Bank, Palestine, 2011**

(570) reported cancer cases were 65 years old and over which formed (38.0%), where (858) cases (57.3%) were between 15 – 64 of age and (70) cases (4.7%) were less than of 15 years of age.

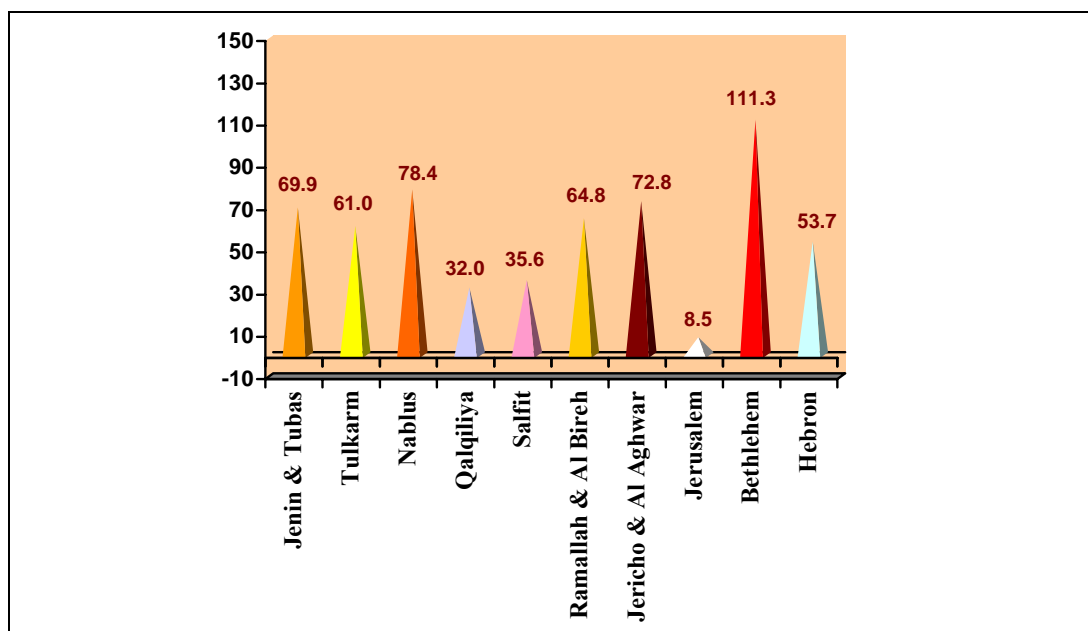

**Figure (15) Distribution of Reported Cancer Cases by Age Group, West Bank, Palestine, 2011**

#### **2.1.3.1.1 Reported Cancer Cases by Governorate:**

The geographical distribution of reported cancer cases shows that Bethlehem governorate reports the highest figures with an incidence rate (111.3) per 100,000 population (216) cases, while Nablus governorate ranked the second place with (273) cases and incidence rate (78.4) per 100,000 population. Jericho and Al-Aghwar in the third place with an incidence rate (72.8) per 100,000 of population and (34) reported cases. There are under reporting for cancer cases from Jerusalem governorate to National Cancer Registry in Palestine.

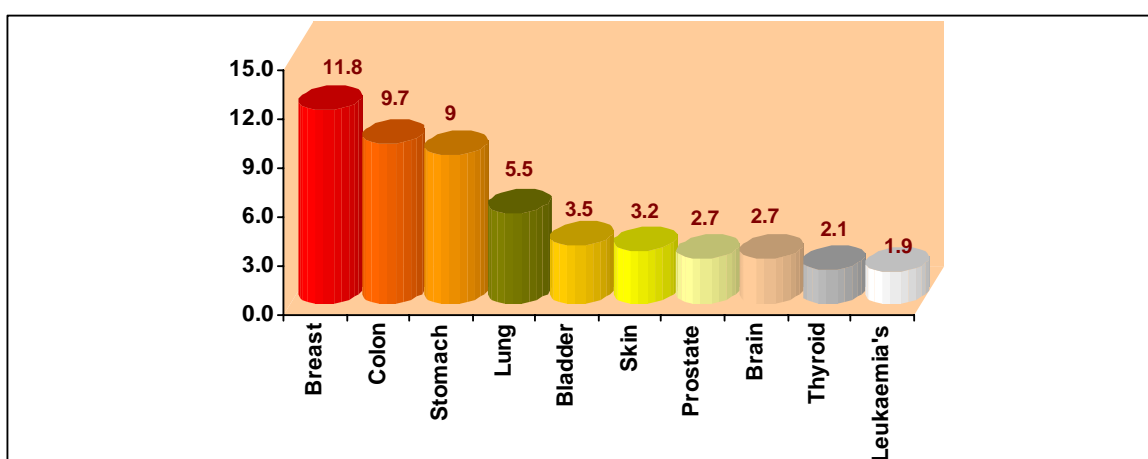

**Figure (16) Distribution of Reported Cancer Cases Incidence Rate per 100,000 by Governorate, West Bank, Palestine, 2011**

### 2.1.3.1.2 Most Common Cancer Cases:

Breast cancer ranked first, with (177) reported cases, (11.8%) from all reported cases. Breast cancer is the highest among females and focus in the age group between 20 -59. Where Colon cancer ranked second, with (145) reported cases and (9.7%) from all reported cancers. Colon cancer is the first type of cancer in males with (69) cases (10.0%) and the second one among females with (68) cases (8.4%). Stomach cancer was in third place according to reported figures, with (135) reported cases (9.0%), of the all reported cases. Stomach cancer was in the third place among females and males. Lung (5.5%), Bladder (3.5%), Skin (3.2%), Prostate (2.7%), Brain (2.7%), Thyroid (2.1%) & Leukemia's (1.9%)

**Figure (17) Most Common Cancer Cases, West Bank, Palestine, 2011**

### 2.1.3.2 Diabetes Mellitus:

In 2011, the total number of new reported cases of Diabetes mellitus in West Bank was (3,984) with incidence rate (154.4) per 100,000 of population.

Tubas governorate with (203) new reported cases and incidence rate (358.4), Qalqiliya governorate with (224) new reported cases and incidence rate (224.0), Salfit governorate with (136) new reported cases and incidence rate (210.5), Jenin governorate (527) new reported cases with incidence rate (187.4), Hebron governorate (1,158) new cases and incidence rate (186.6), Jericho & Al-Aghwar governorate (78) new cases and incidence rate (167.0), Nablus governorate with (570) new reported cases and incidence rate (163.8), Ramallah & Al-Bireh (490) cases and incidence rate (158.0), Tulkarm governorate (254) cases with incidence rate (150.3), Jerusalem governorate (J2) (180) cases with incidence rate (126.8), Bethlehem governorate (164) new cases with incidence rate (84.5),

#### 2.1.3.2.1 Types of Diabetes Mellitus according to patient visits:

(5%) of patients with type one of diabetes, (94.6%) with type two, (0.2%) gestational diabetes mellitus and (0.2%) of patients in impaired glucose tolerance.

### 2.1.3.2.2 Treatment of type II of Diabetes Mellitus:

Only (0.6%) of diabetic patients on diet, (9.7%) of patients on compound treatment (tablets and Insulin), (22.1%) of patient on Insulin treatment and (67.6) of type II diabetic patients are on oral hypoglycemic drugs.

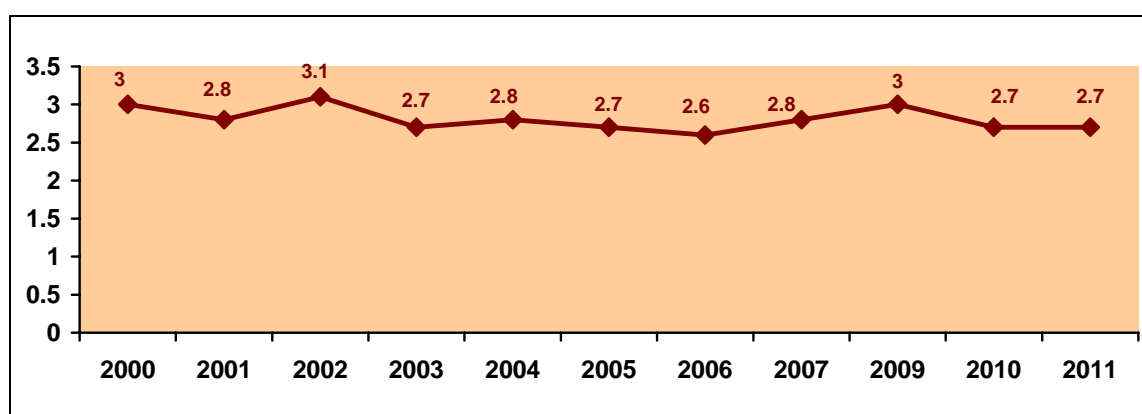

## 2.2 Reported Mortality:

In 2011, the total number of reported deaths in Palestine was (11,415); (6,105) males (53.5%) and (5,310) females (56.5%), (7,237) out of them were in West Bank (3,785) males and (3,452) females, (4,178) deaths reported in Gaza Strip (2,320) males and (1,858) females.

### 2.2.1 Crude death rate (CDR):

According to PHIC figures, the crude death rate declines progressively over the years. The crude death rate for Palestine declined from (3.0) per 1,000 of population in 2000 to (2.7) per 1,000 of population in 2011. In Gaza Strip the crude death rate reached (2.6) per 1,000 of population in 2011, while in West Bank the crude death rate reached (2.7) per 1,000 of population in 2011.

**Figure (18) Reported Crude Death Rate, Palestine, 2011**

### 2.2.2 Infant Mortality:

The reported infant mortality rate was (18.8) per 1,000 live birth for the year 2011

### 2.2.3 Leading Cause of Death:

In 2011, the 10th leading cause of deaths in West Bank was as following:

- 1- Cardiovascular disease (22.4%)
- 2- Cancer deaths (12.4%)
- 3- Cerebrovascular diseases (10.3%)
- 4- Diabetes mellitus (8.6%)
- 5- Respiratory system diseases (7.0%)
- 6- Conditions of infant diseases and prenatal conditions (5.7%)
- 7- Septicemia (4.8%)
- 8- Renal failure (4.5%)
- 9- Accidents (2.9%)
- 10- Senility (3.4%)

#### **2.2.4 Cancer Mortality:**

The reported figures by MOH shows remarkable increase in Cancer mortality in West Bank 2011 compared with 2007 and 2010, from (10.3%) in 2007 to (10.8%) in 2010 then increases to reach (12.4 %) from the total deaths in West Bank in 2011. Lung cancer was the highest one; it was (18.2 %), Colon and Breast Cancer (14.5%).

Cancer mortality in males is higher than in females (53.8%) and (46.2%).

#### **2.2.5 Maternal mortality:**

Maternal mortality rate in West Bank in 2009 was (38/ 100,000 live birth) this rate decreased to reach (28/ 100,000 live birth) in 2011. The Pulmonary embolism was the main cause in these deaths.

## Section 3: Health

The five main health providers of health services in Palestine are Ministry of health, UNRWA, NGOs, Palestinian Military Medical Services (PMMS) and Private for profit. MOH bears the heaviest burden, as it has the responsibility. In the Gaza Strip, there are (54) primary health care centers and in the West bank, there are (404) primary health care centers. The health services are distributed throughout Palestine. In addition MOH provides a number of specific health programs as: health education\ community involvement, school health, immunization, human resources development, and referral of patients to non – MOH facilities (when services are not available in governmental facilities). UNRWA operates (20) primary health care centers scattered in eight refugee camps in the Gaza Strip and (41) centers in the West Bank. The NGOs sector operates (206) primary health care centers and general clinics, (66) of them in Gaza Strip, and in the West Bank they operate (140) primary health care centers where PMMS operate (23) primary health care centers and clinics (7) of them in Gaza Strip and (16) distributed through different districts in West bank.

### 3.1 Health services

#### 3.1.1 Health Services Providers:

In Gaza strip, there are (147) primary health care centers run by four main providers:

- 1- Government: (54) primary health care centers.
- 2- UNRWA: (20) primary health care centers.
- 3- NGOs: (66) primary health care centers.
- 4- PMMS: (7) primary health care centers.

In the West Bank there are (669) primary health centers run by four main providers:

- 1- Government: (404) primary health care centers.
- 2- UNRWA: (41) primary health care centers.
- 3- NGOs: (140) primary health care centers.
- 4- PMMS: (16) primary health care centers.

### 3.3 Secondary and Tertiary Health Care:

The hospital services are operated by the government and non-government sectors. The hospitals in both sectors have improved in terms of facilities, technical and support services over the years by adding new departments and diagnostic equipment, as well as providing continuous professional training.

#### 3.3.1 Hospital facilities:

There are (81) hospitals in Palestine; (51) in West Bank and (30) in Gaza Strip, with total number of (5,414) beds in government and non-government hospitals; (58.4%) in West Bank and (51.6%) in Gaza Strip. (75.2%) of them are general beds, (14.6%) specialized beds, (3.7%) rehabilitation beds and (6.5%) maternity beds. In Palestine, there are (13) beds per 10,000 of populations; (12.3) bed in West Bank and (14.2) bed in Gaza Strip.

**Figure (19) Distribution of Hospital Rate per 100,000 of populations, and Number of Beds per 10,000 Populations, by Governorate, Palestine, 2011**

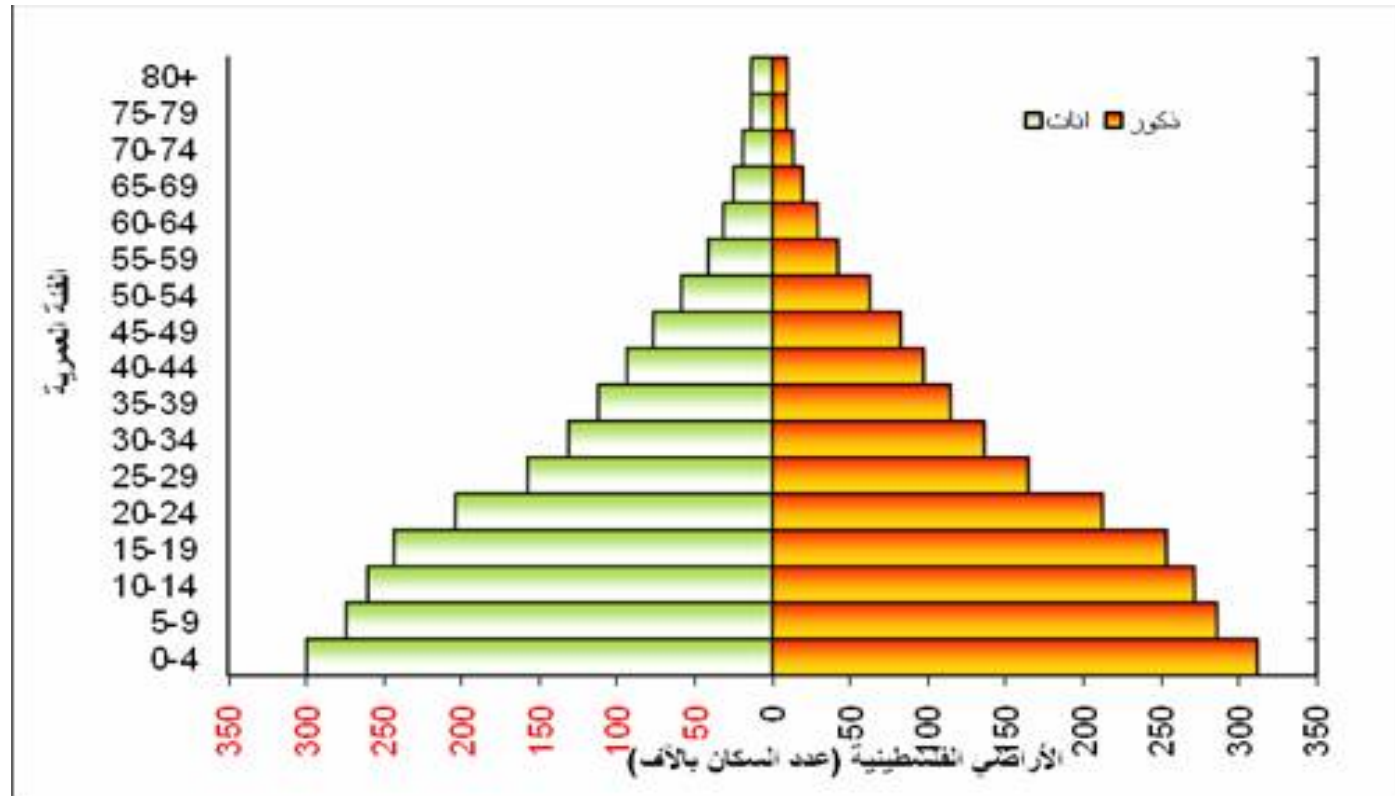

### 3.4 Health Finance:

The actual expenditure of the MOH in 2011 was (1,233,976,526) NIS. The salaries were (45.4%) of the total expenditure;
